M.Arch & Lead Concept Formulator

THE ARCHITECTURE OF LIVING WITH NATURE

Form, Topography, and the Boundary Between Inside & Outside

A private residence is the purest expression of architectural poetry and structural integrity. At BIMCO Studio Barcelona, our villa designs do not impose themselves upon the landscape; they grow organically from the earth's natural contours.

Whether carving into steep mountain hillsides or framing panoramic desert horizons, each residence is conceived through a harmonious balance of raw materiality—exposed concrete, tactile timber, natural stone—and endless natural daylight.

Crucially, every project in this monograph is presented in its entirety: starting from initial volumetric concepts through verified floor plans, cross-sections, and active worksite execution records.

UNINTERRUPTED MONOGRAPH PROTOCOL

Every project is presented with complete continuity from plans to execution.

PROJECT ARCHIVE & SEQUENCE

Chronological Architectural Records (All Sheets in Consecutive Order)

01

VIOLET LUXURY RESIDENCE

Complete Project Presentation (9 Consecutive Sheets)

PGS 03 - 11 / 24

02

TEHRAN DASHT MODERN VILLA

Complete Project Presentation (4 Consecutive Sheets)

PGS 12 - 15 / 24

03

AUSTRALIA VILLA & CURVED RESIDENCES

Complete Project Presentation (7 Consecutive Sheets)

PGS 16 - 22 / 24

Technical Standards & Quality Assurance Protocols

PAGE 24 / 24

Designing with no limits is every architect's dream, and when it's combined with nature, like this project, it turns to something special. Our designers tried to do their best in creating something unique yet simple to combine with its surrounding

Open space and Semi-open space are used in this project to create different experiences for the user. They can be used in different weather conditions to enjoy the beautiful natural surroundings of the project

The combination of concrete and glass materials is like a surreal experience where you can imagine the concrete blocks are floating in the air. The outside pool is a great feature for the villa and can enhance the air ventilation and temperature in the house. It also provides a great playing area for the kids

The most attractive rooms in our homes are usually rooms with the largest openings. We believe that during the daytime the sunshine can improve the bedrooms atmosphere, but it's very important to consider right curtains to be used during the night or when you need darkness to prevent excess light from the outside and thick cream color curtains will properly do same in this project. There's something so cheering and fascinating about floor to ceiling bedroom windows

As you can see in the architectural rendering outcomes the terrace has a special design and, combined with its nature, instead of cutting a tree that was within construction area, we decided to combine it with a terrace and use it as a natural shade

Proper lighting is also completing this beauty, an organic shape chandelier in the middle of the space for the main light and spotlight in the ceiling for focused and area lights

When you think of enjoyable and relaxation spaces during the warm-weather months, homes at the beach or in the country immediately come to your mind.

There's always something attractive about summer and the beautiful outdoor spaces that come with it. This terrace is a place where you can sit in a luxuriant space while enjoying a view that's dominated by a sea of trees, or take your morning coffee with a panorama of the land from higher than ground level.

The combination of concrete and glass materials is like a surreal experience where you can imagine the white concrete blocks are floating in the air. The outside pool is a great feature for the villa and can enhance the air ventilation and temperature in the house. It also provides a great playing area for the kids

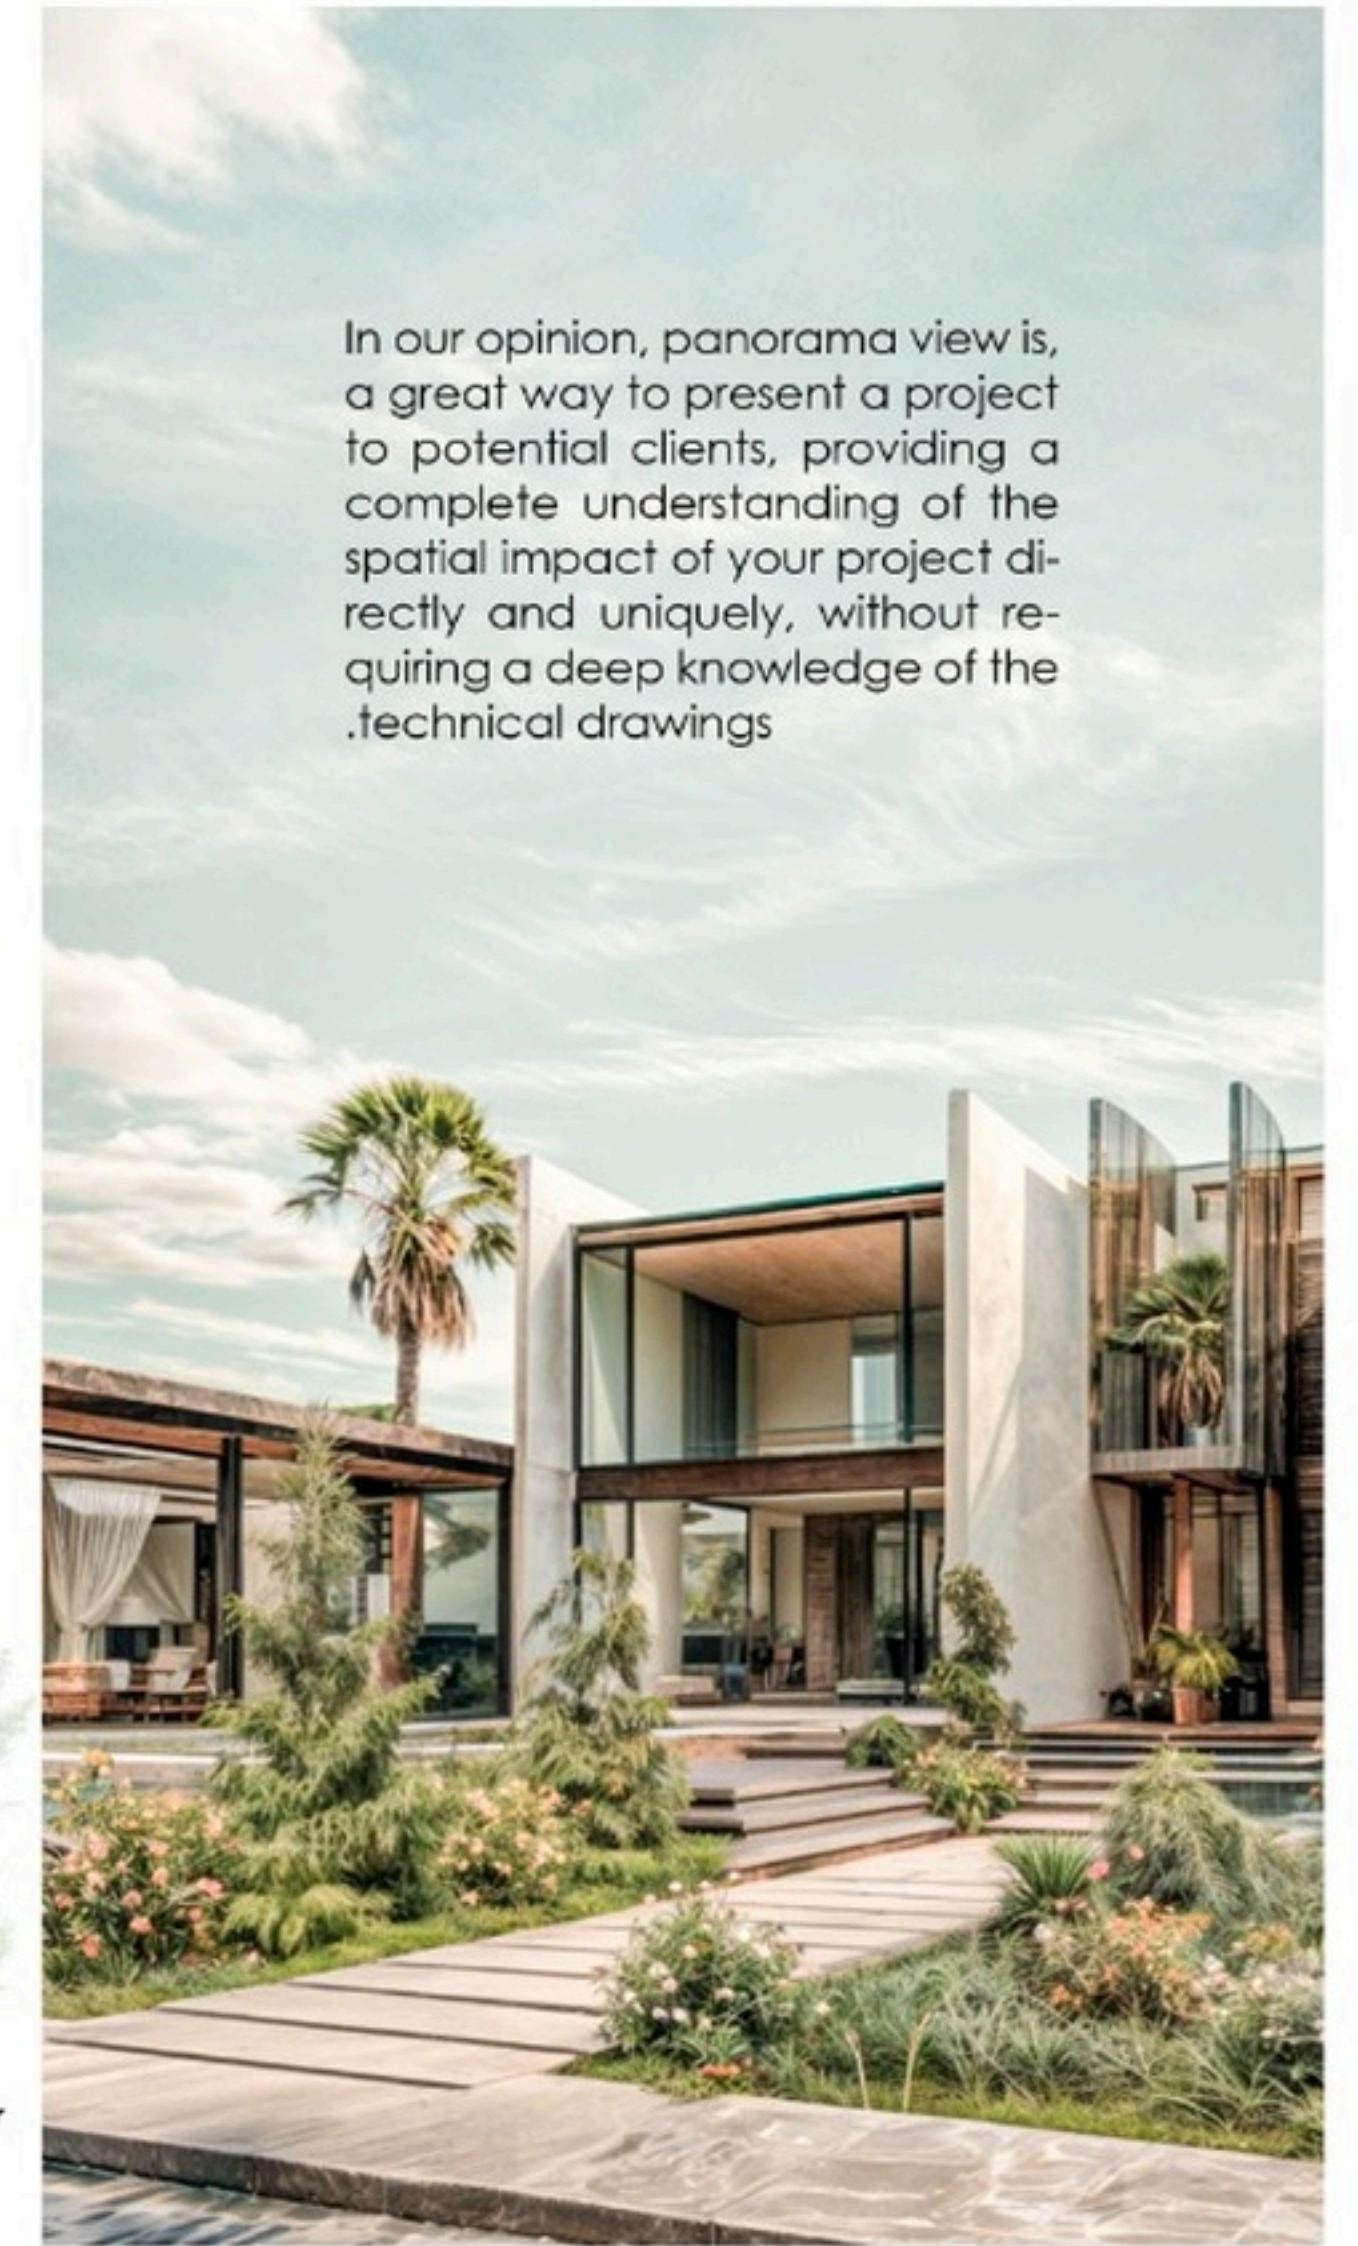

By placing the large windows in the concrete walls, the thickness of the material is visible. Therefore it reveals the compactness of the building's shell

The dining table is also chosen in stone material and placed in front of the terrace window which allows the owners to open the windows in warm seasons and have a great time eating their meals

SOUTH ELEVATION
SC : 1/100

In our opinion, panorama view is, a great way to present a project to potential clients, providing a complete understanding of the spatial impact of your project directly and uniquely, without requiring a deep knowledge of the technical drawings

The flooring for is slab stone parquet both for interior and exterior space, this technique of choosing the same material for different spaces helps the user to create the connection between them mentally and feel like they are in the terrace while they are enjoying the controlled climate of the inside. The chosen materials enhance the .aspired monolithic expression

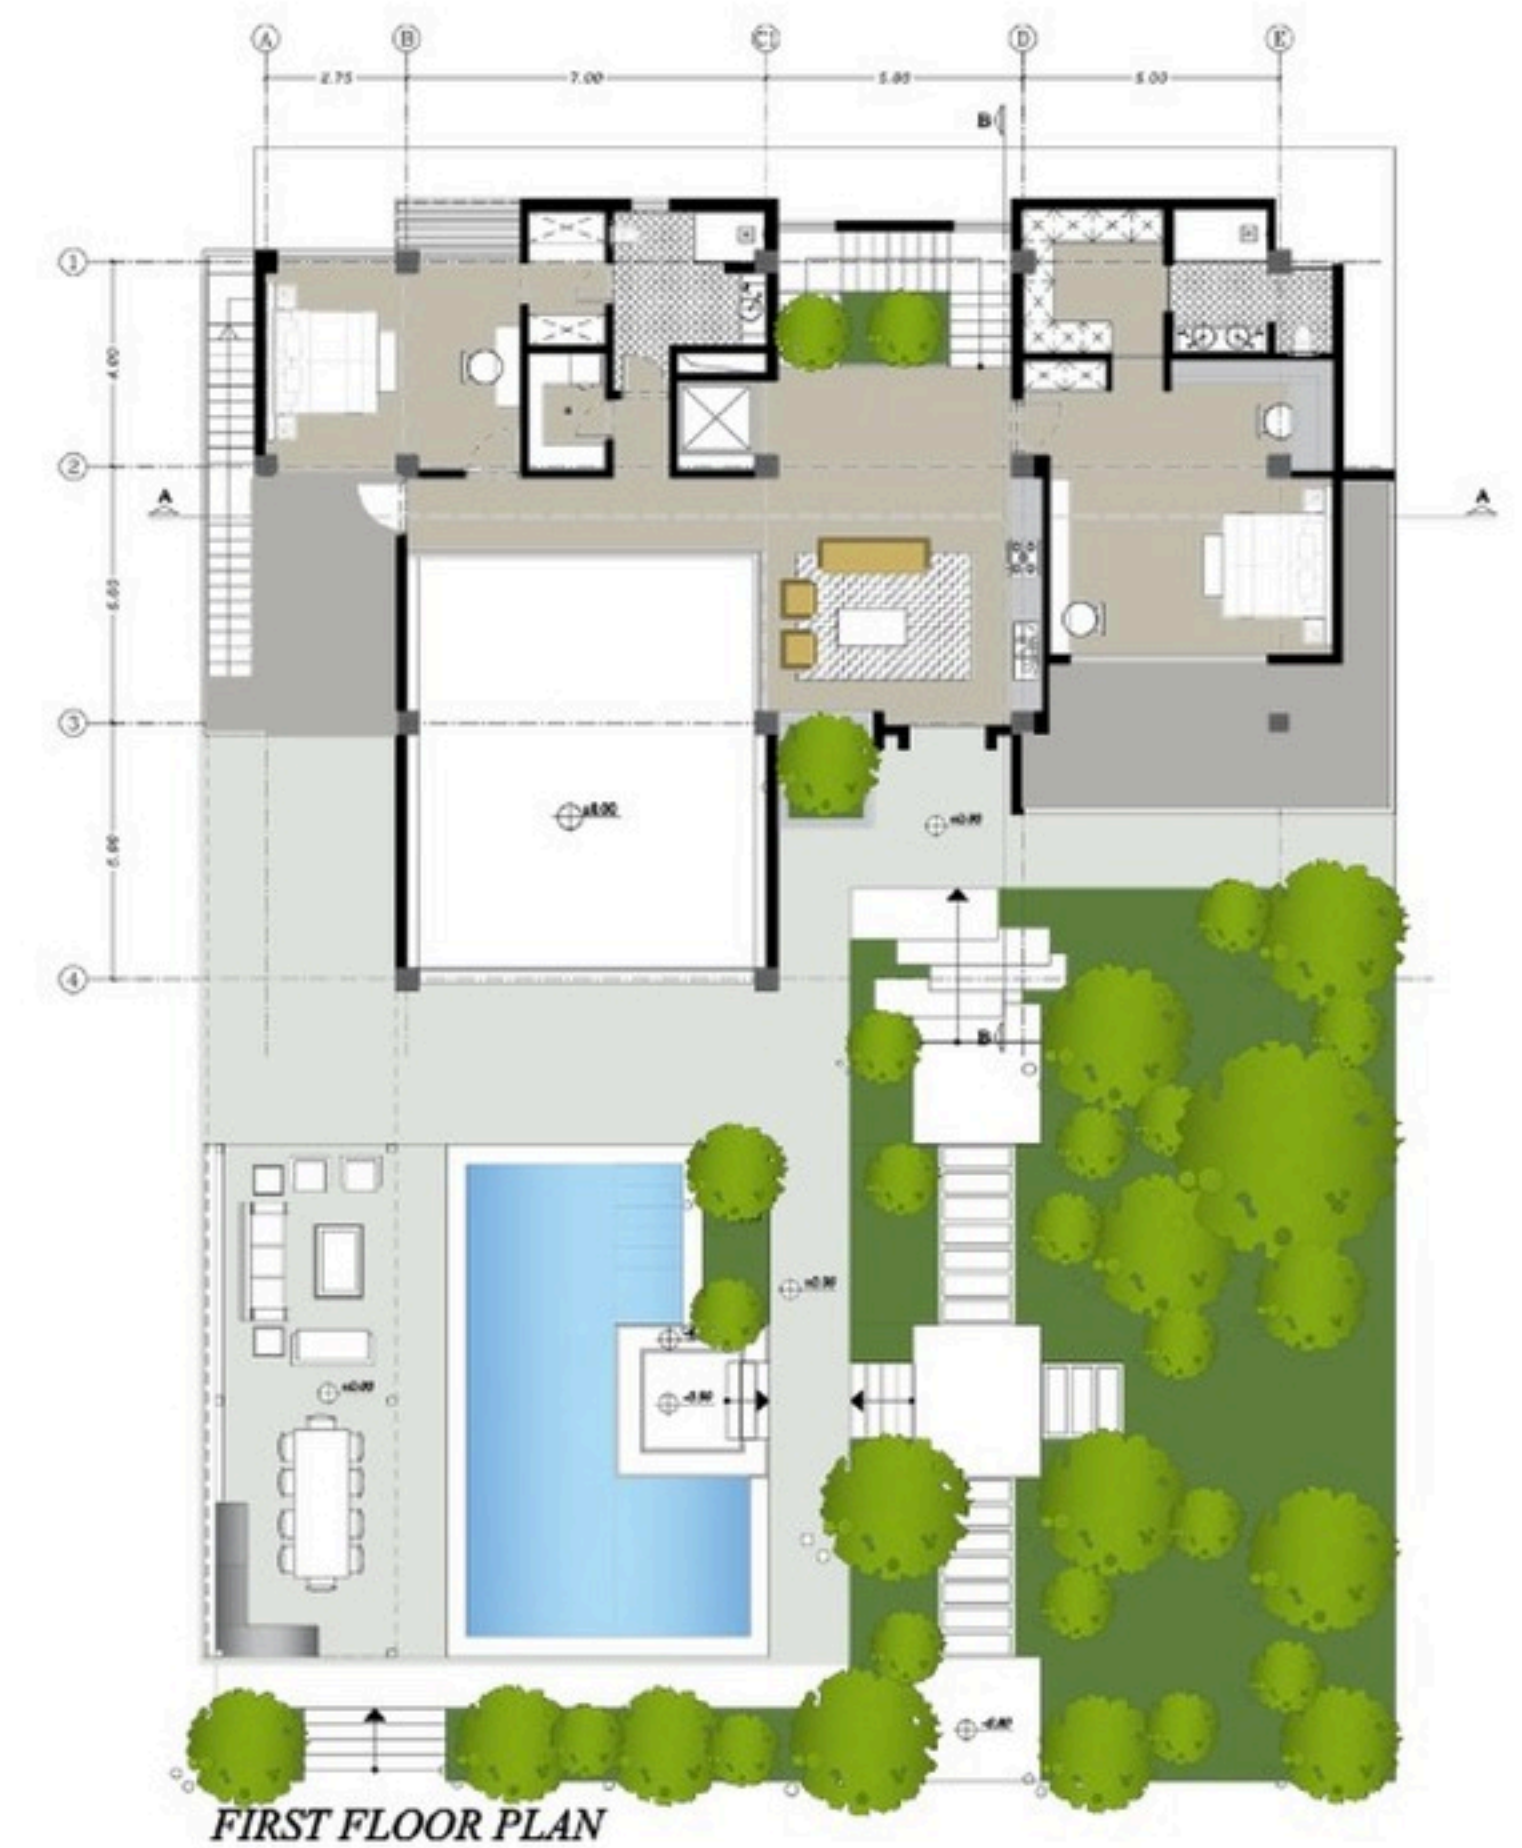

As you can see in the architectural renders, the villa was designed as a calm concrete block. The façade was designed with the material combination of white concrete and stone, their colors to make a significant volume. The terrace on the upper floor which is exactly cut out within the volume and the different set window openings

The client wanted spaces that flowed from the inside out, and that would "involve the site and surroundings into space while retaining a sense of protection for the users

Unlike the building façade, the south side of the villa is mostly open. The large glass openings merge interior and beautiful exterior surroundings as much as possible and give the villa the ability to use the maximum possible natural light in the interior space

Key elements include customer-centric zoning, engaging display design, effective color and branding, efficient circulation and checkout areas, and high-quality, sustainable materials. The goal is to influence customer behavior, guide their journey, and provide a positive experience that reflects the business's goals and brand values

The terrace on the upper floor which is exactly cut out within the volume and the different set window openings, as well as the changing of the façade material to glass, gives the rather simple and sharp cut volume a thrilling and cool architectonic expression

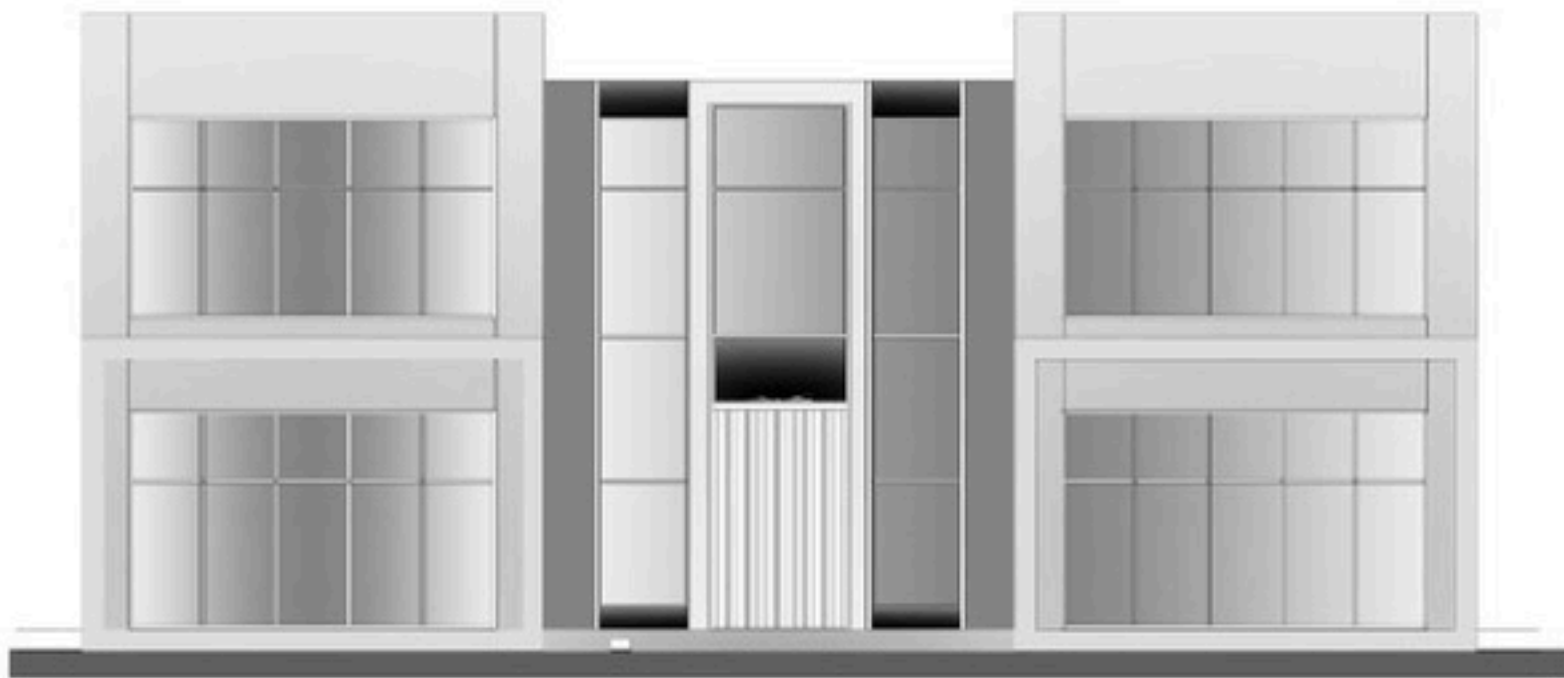

Unlike the building façade, the south side of the villa is mostly open. The large glass openings merge interior and beautiful exterior surroundings as much as possible and give the villa the ability to use the maximum possible natural light in the interior space

TEHRAN DASHT VILLA

Modern villa design emphasizes a minimalist aesthetic, clean lines, and a focus on functionality and comfort. It often incorporates large windows, open floor plans, and natural materials to create a sense of spaciousness and connection with the outdoors

modern villas frequently utilize materials like glass, steel, and concrete to achieve a sleek, individual look, while prioritizing practicality and utility

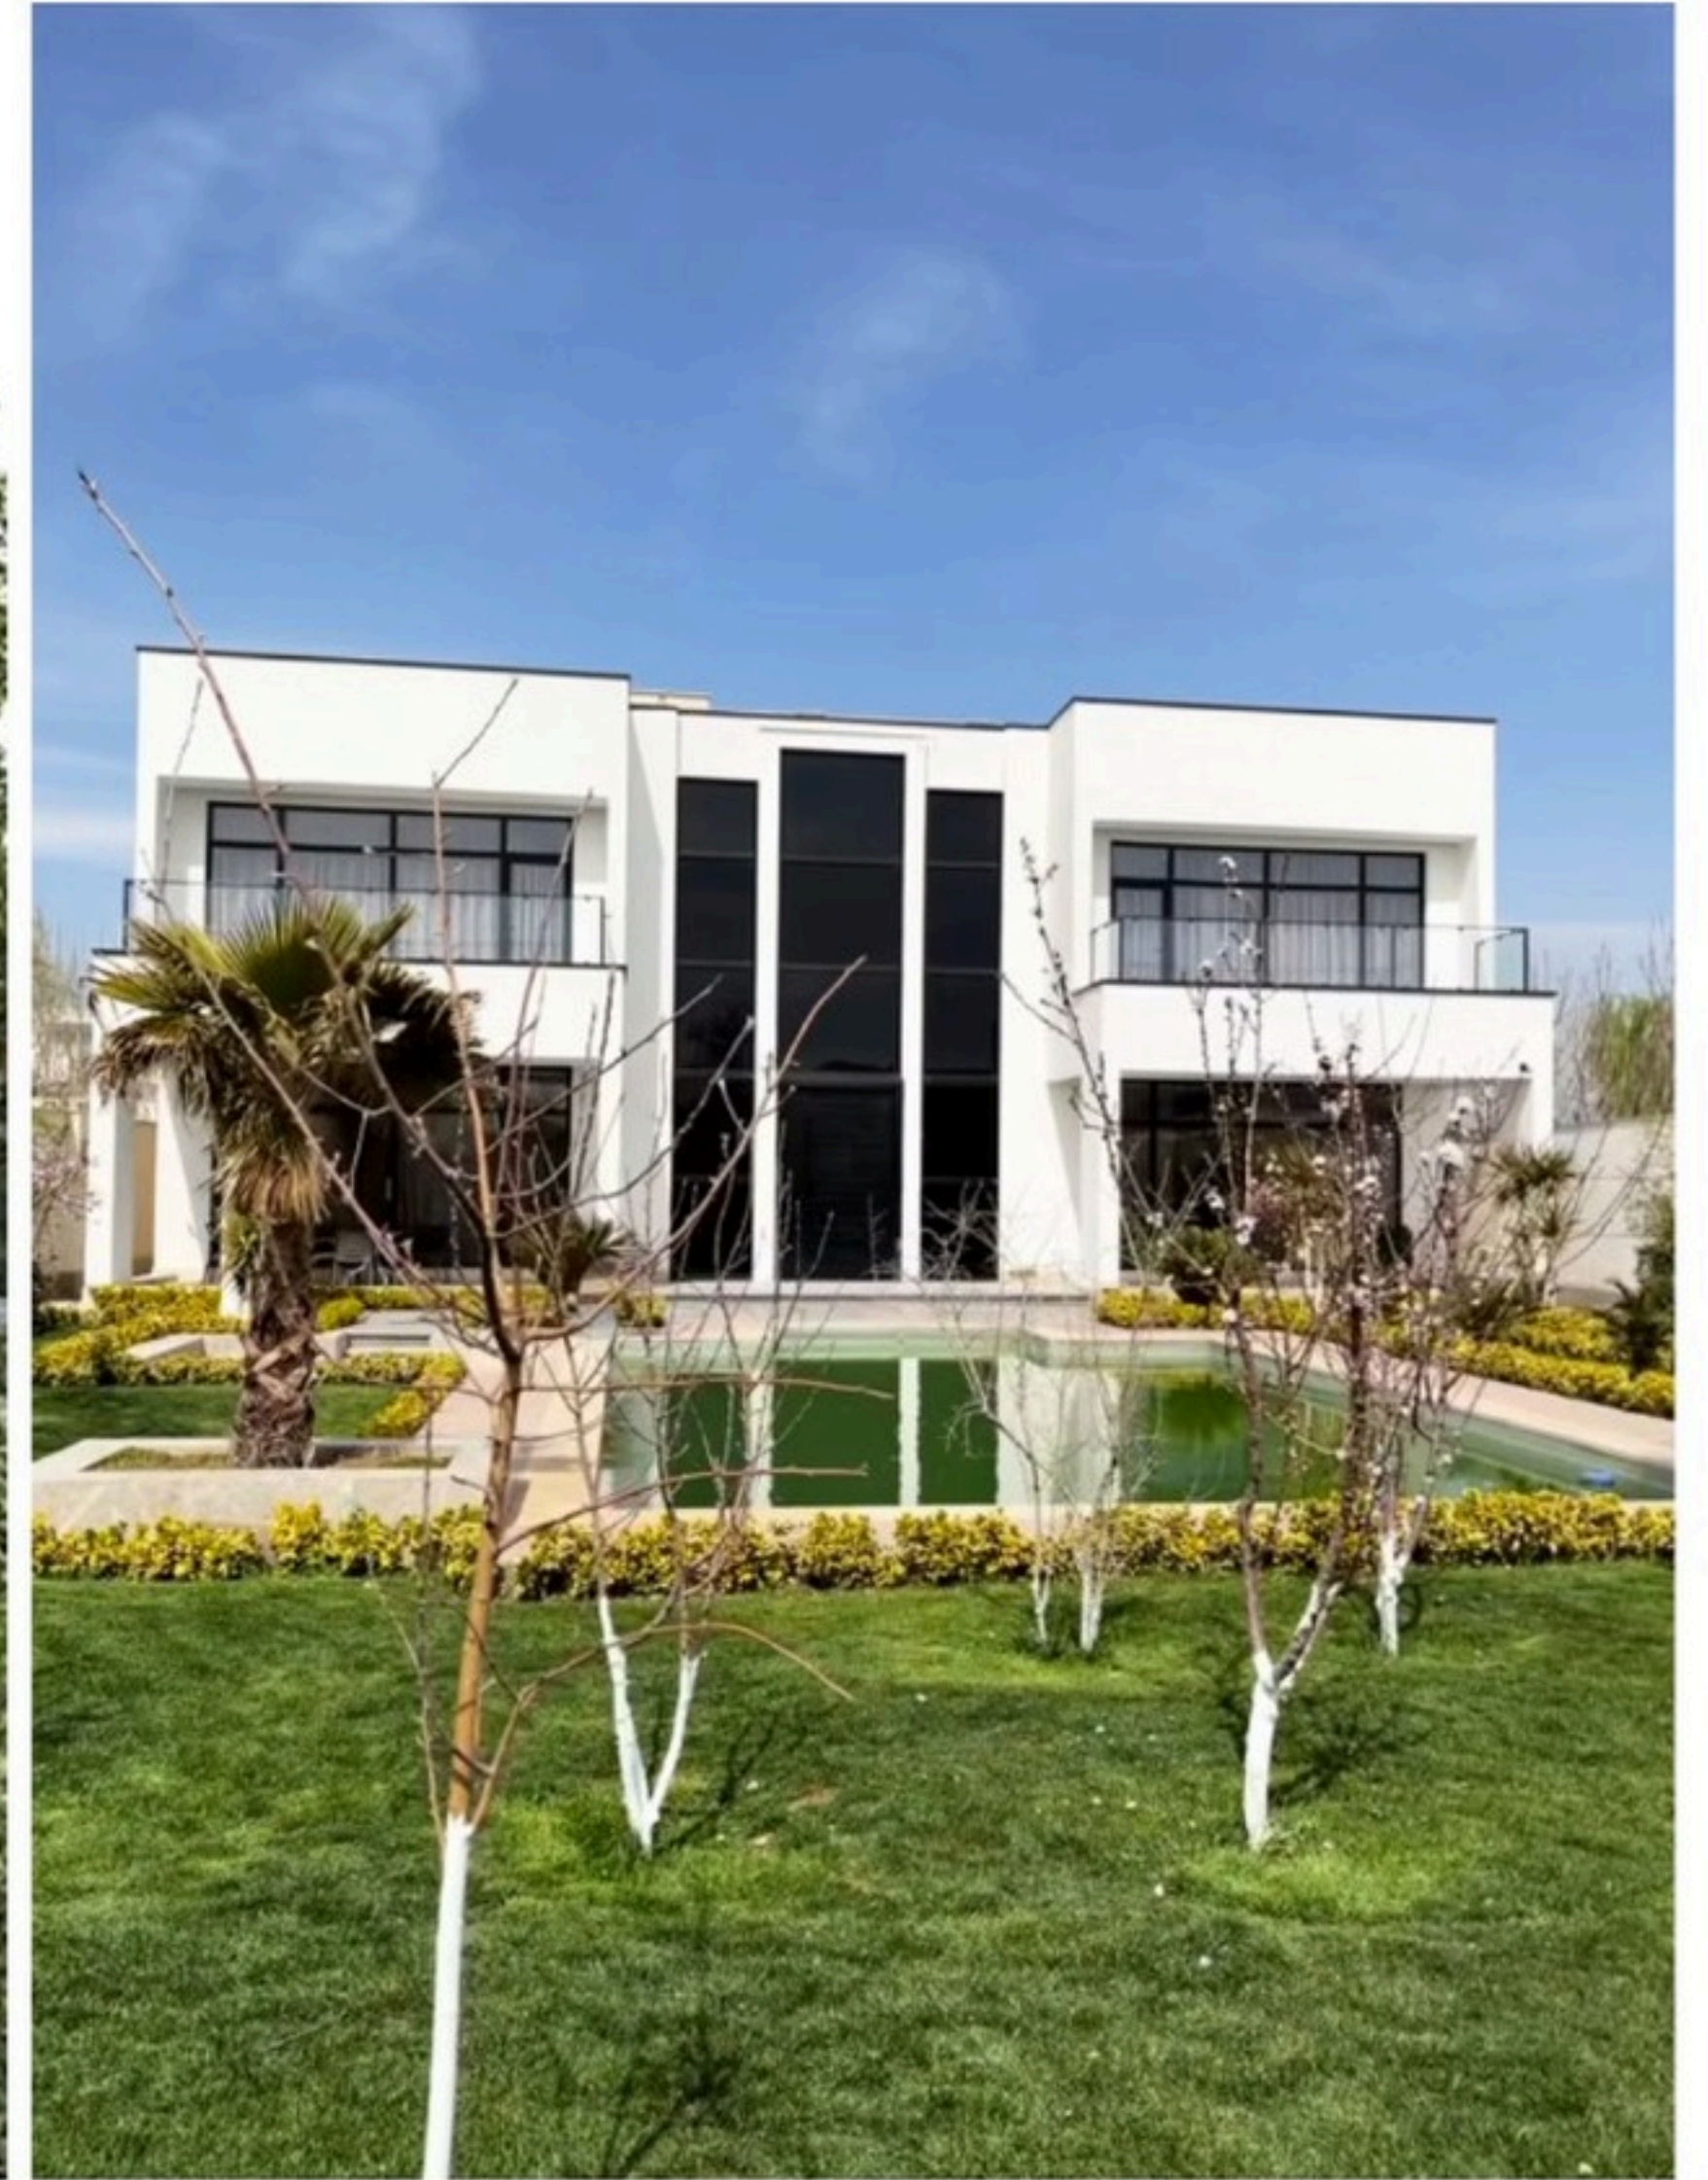

:Large Windows and Glass Walls
These elements flood the interior with natural light and offer panoramic views of the surrounding landscape

:Neutral Color Palettes
Whites, grays, and earthy tones are typical, creating a calming and sophisticated atmosphere

:Minimalist Design

Modern villas often feature clean lines, simple forms, and a lack of ornamentation

:Open Floor Plans

Open layouts maximize space and light, creating a sense of flow and connection between living areas

Aram Project
Client: Mr.Ghafari
Location: Sari, Mazandaran

2024-2025

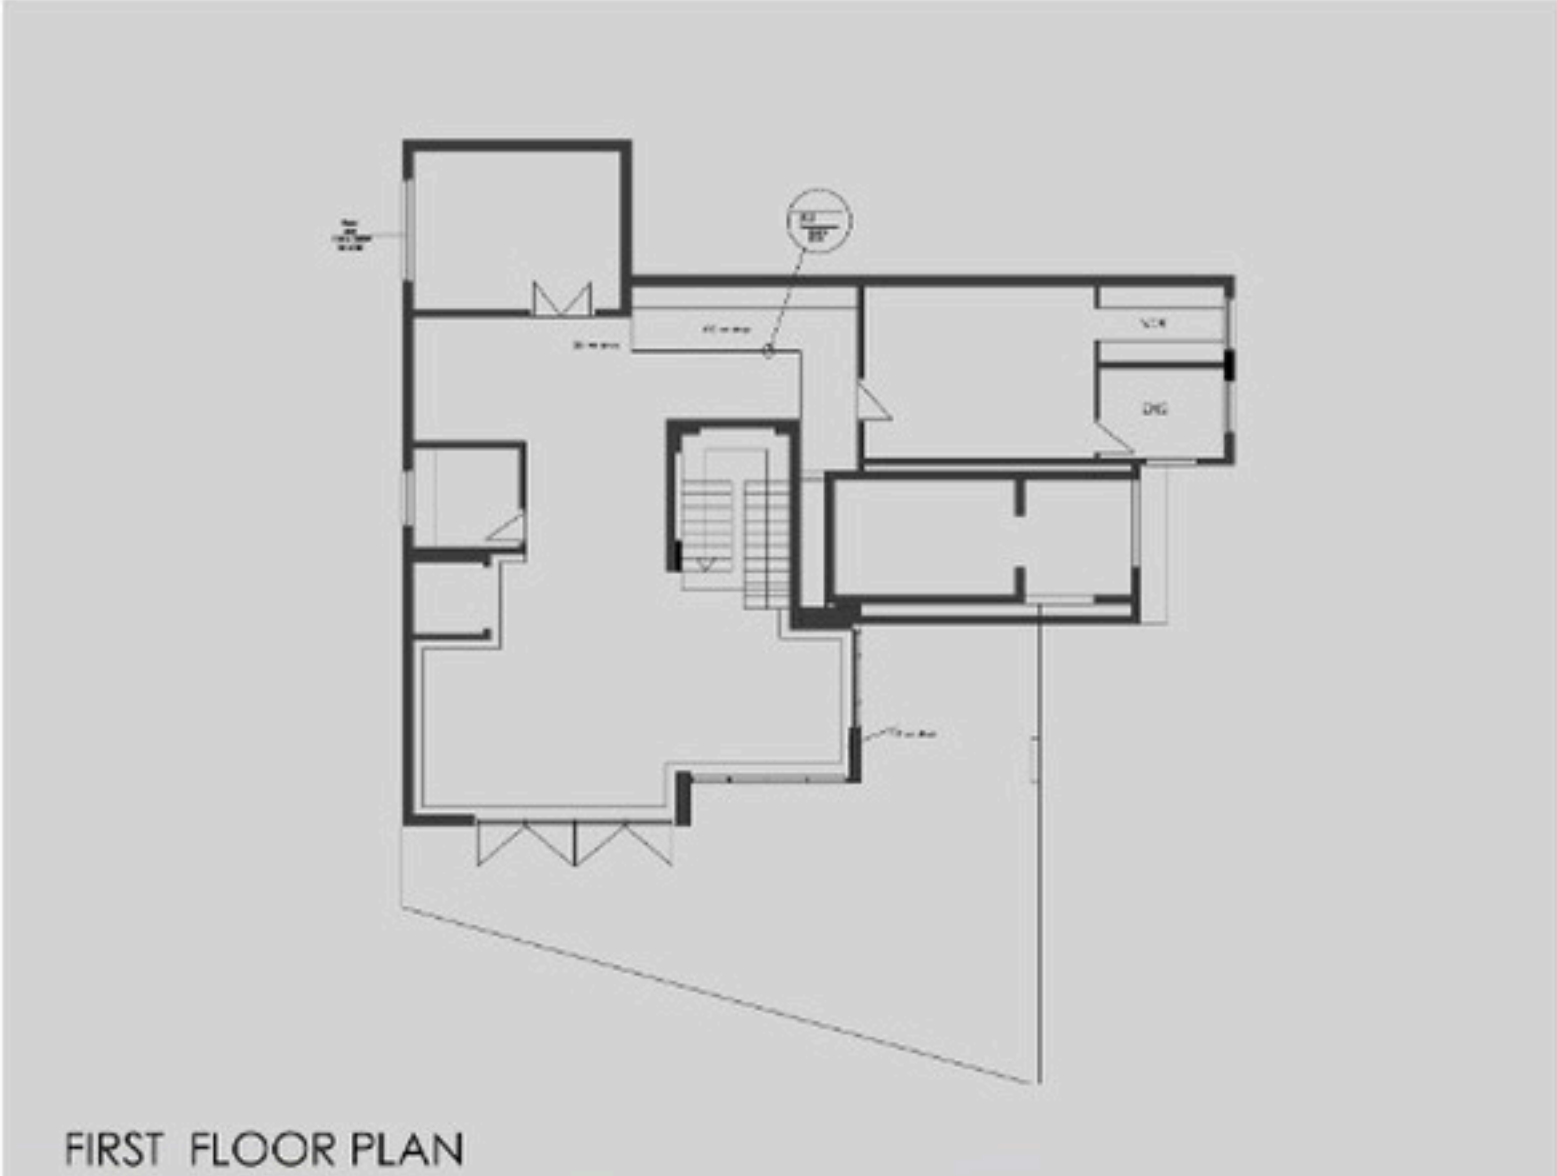

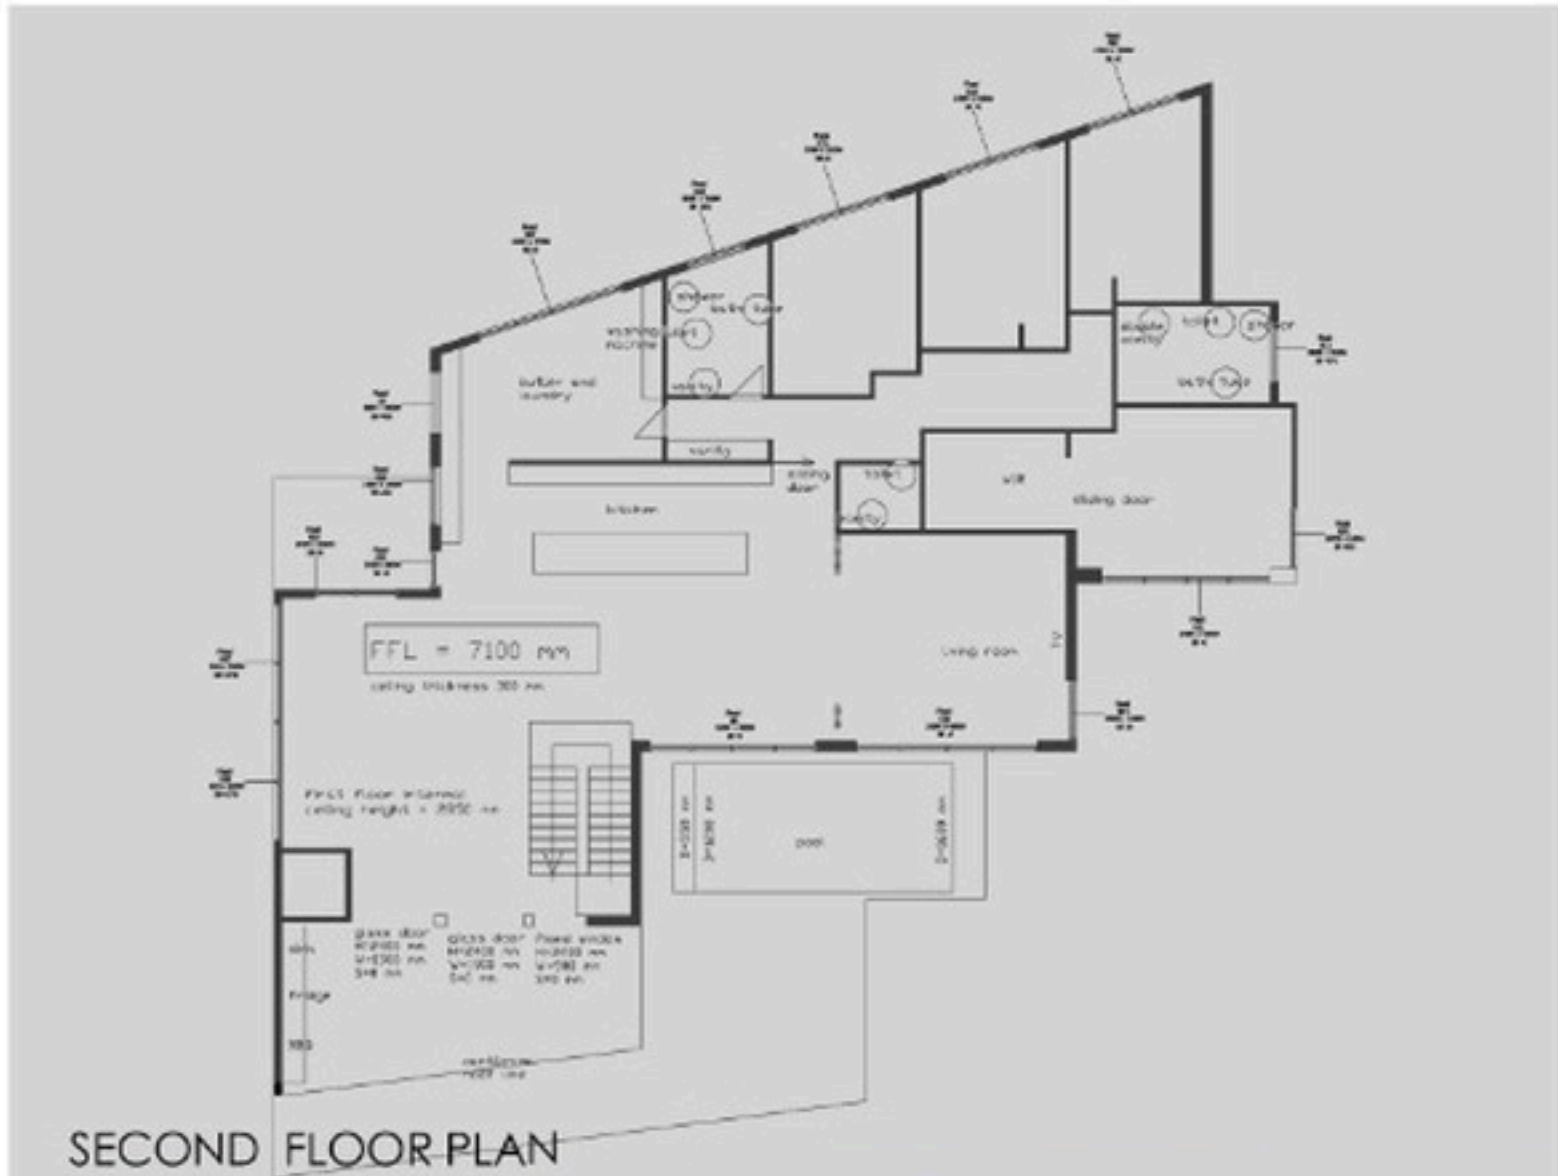

Aram project is a residential villa which located in sari, mazandaran. the modern villa designed with a balanced combination of dark and light cement-based finishes, creating a clean and contemporary facade language.

The home has been designed to be a place for reflection and connection with nature, arranged around a series of existing trees to have as little impact on the woodland as possible

As you can see in the architectural rendering outcomes the terrace has a special design and, combined with its nature, instead of cutting a tree that was within construction area, we decided to combine it with a terrace and use it as a natural shade

Interior space of this house is warm and cozy not like most of the modern spaces that are cold. Natural wood flooring connecting the outdoor forest to the interior space and simple furniture and accessories let you concentrate on nature through the floor to ceiling windows

villa in Australia

Designing with no limits is every architect's dream, and when it's combined with nature, like this project, it turns to something special. Our designers tried to do their best in creating something unique yet simple to combine with its surrounding

Open space and Semi-open space are used in this project to create different experiences for the user. They can be used in different weather conditions to enjoy the beautiful natural surroundings of the project

To enhance the interior and exterior connection, floor to ceiling windows are selected. These windows bring the breathtaking outside natural environment inside the house. The windows frames are in harmony with tree trunks, as they merge with the vertical pattern of trunks

videos provide an excellent starting point for conversations about how space will feel and enables clients to gain a better understanding of the project. Because our client wanted to sell this building we provided this panorama renders to help them achieve their goals

There's always something attractive about summer and the beautiful outdoor spaces that come with it. This terrace is a place where you can sit in a luxuriant space while enjoying a view that's dominated by a sea of trees, or take your morning coffee with a panorama of the land from higher than ground level. We believe that a house in a beautiful landscape needs enough open space to feel its surroundings

SOHEIL MASTI

BIM Director & Computational Architect

BIMCO Studio Barcelona • Spain & International

EXECUTIVE ROLES & PRACTICE SPECIALIZATION:

- Strategic BIM Implementation & Information Architecture
- Multi-discipline Clash Detection & LOD 350 Coordination
- Parametric Façade Engineering & Environmental Optimization
- Automated Quantities, Cost Modeling & Fabrication Schedules
- Executive Supervision & Construction Quality Assurance
- International Project Delivery across Spain, EU & Middle East

SIAVASH PAZOOKI

Senior Architectural Designer & High-End Visualizer

M.Arch & B.Arch • BIMCO Studio Barcelona Partner

EXECUTIVE ROLES & PRACTICE SPECIALIZATION:

- Lead Architectural Concept Designer & Spatial Formulator
- Advanced 3D Photorealistic CGI & Atmospheric Visualizations
- Complex Elevation Tectonics, Louver Systems & Material Studies
- Executive Floor Plans, Sectional Studies & Millwork Details
- Active On-Site Construction Monitoring & Build Integrity Control
- Over 8 Years Leading Signature High-End Commissions

ARCHITECTURAL VERIFICATION STANDARDS

Executive Quality Assurance & Practice Protocols

01. UNBROKEN PROJECT CONTINUITY

Every architectural commission in this monograph is presented in full chronological sequence without isolated or fragmented sheet sampling.

02. COMPUTATIONAL BIM LOD 350 INTEGRITY

All designs are backed by coordinated Building Information Models with Clash Detection, accurate material schedules, and parametric modeling.

03. VERIFIED SITE EXECUTION & SUPERVISION

Executive on-site supervisory records substantiate physical constructability, structural fidelity, and bespoke craftsmanship.

04. PERIMETER INTELLECTUAL PROPERTY

All original concepts, structural solutions, and renders are protected by international copyright under BIMCO Studio Barcelona.

05. COLLABORATIVE CLIENT ADVISORY

Direct partner access to principals Soheil Masti and Siavash Pazooki for international commissions across Spain, the EU, and the Middle East.
